1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

2. Claims 1-22 are rejected under 35 U.S.C. 103(a) as being unpatentable over Tamura et al (US 6,306,577).

Tamura shows that it is known in the art to determine the rate at which some characteristic which can be measured by an optical test changes by determining the time which is required for the optical measurement to change from one level to another. The system of Tamura is an optical measurement (column 3, line 27-29; column 7, lines 30-34), which, as well known in the art, can be routinely measured by means of a system with a light source and a detector which send light to and receives light from the sample. The second threshold level is inherently "a predetermined percentage" of the first, any two thresholds values can be presented as one being a predetermined percentage of the other. The use of such a system would be obvious to use with any measurement which changes over time.

3. Ashley et al (US 4,309,112) shows a similar rate measuring system.
